Nepatop Gas Geyser

A replacement for your existing electric or solar offering, our gas geysers only heats water when you need it. With a gas water heater, you are not paying for your geyser to be kept hot all the time, as this gas geyser system works with a pulse igniter that ignites when you open your hot water tap. Similarly, the moment you close the hot water tap your gas water heater stops. This is the most efficient method of hot water systems.

Nepatop provides its customers the most reliable Gas Geyser at the reasonable cost.

Advantages of Nepatop Gas Geyser

- Powerful However large or small your hot water requirements are – Bosch has the appliance with the output to suit.
- Economical Instantaneous water heaters only use energy when hot water is used.
- Safe Our built-in safety devices: prevent gas leak if there is no flame, switch off the appliance if the exhaust is not functioning properly, and a Temperature limiter protects the heat exchanger against overheating.
- Convenient Hot water wherever and whenever needed.
- User and environmentally friendly Hydrogenerator ignition, an innovation by Bosch, requires no batteries, and no manual start-up. You simply have to open the hot water tap: as green as it gets.

- Compact Attractive and compact design saves space and makes these appliances ideal for both old and new properties.
- Versatile Whichever option you choose – point of use or central supply – Bosch has the right water heater for you.
